

Participation in:
Enlit Europe
28-30 November
2023
Paris, France

Dear reader,

Greetings from the PRECEPT team!

We're thrilled to bring you a recap of our participation at Enlit Europe 2023. It was a dynamic event that provided a platform for meaningful connections, insightful discussions, and exciting possibilities in the realm of sustainable energy.

Discussion: Energy Data Spaces - Buildings

An insightful and productive discussion focusing on the search of best practices for data sharing, in order to develop an efficient, competitive market for a digital energy infrastructure and digital energy services that are both cyber-secure and sustainable.

Mr. Konstantinos Arvanitis, representing PRECEPT, delved into market needs and gaining valuable cross-sectoral insights from building data spaces. A focused conversation on shaping the path towards a more cyber-secure and sustainable digital energy landscape took place.

Exploring the Power of Synergies! We also had the privilege of connecting with the Smart2BProject, emphasizing the importance of collaboration and synergies among EU projects. Sharing insights and experiences pave the way for a stronger, more resilient energy future.
